

Water boiler Service/Insurance Inspections

Get ready for the Spring Season and book yours in for a service

We advise this service to be carried out at least every 12 to 18 months.

Even though we consider Cumbria and Lancs to be a 'soft water' area, copper and steel water tanks can still get scaled up over time and cause faults and even damage machines.

Always keep your filters checked and replace when required. We can supply water filters for all Instanta, Lincat, Calomax and Marco water boilers.

WATER/STEAM BOILERS:

The pressure safety regulations 2000 require that pressure vessels such as steam/water boilers must not be operated unless the user/owner has a current 'Written Scheme' for the periodic examination of all safety devices, pipelines and those parts which may give rise to danger.

We can:

- Service all types of water & steam boilers
- Carry out both 'thorough' and 'working' examinations
- Provide insurance inspections
- Supply loan machines if required
- Supply new machines if required

- Front end service for Water & Steam boilers
- Clean probes, check valve operation
- Check pressure valve, check seals
- Operating temperature, limescale check
